

Python Mini Project

Project 1: Smart Student Profile & Performance Analyzer System

Input: Name, Marks

Output: Grade and Average

Flowchart:

Start → Input → Process → Calculate → Display → End

Project 2: College Event Registration System

Input: Name, Event

Output: Ticket Confirmation

Flowchart:

Start → Input → Store → Validate → Print → End

Project 3: Expense Tracker

Input: Daily expenses

Output: Monthly total

Flowchart:

Start → Input → Sum → Store → Display → End

Project 4: Library Management System

Input: Book ID

Output: Issue/Return Status

Flowchart:

Start → Input → Search → Update → Display → End

Project 5: Online Quiz System

Input: Answers

Output: Score

Flowchart:

Start → Input → Check → Score → Display → End

Project 6: Hospital Management System

Input: Patient details

Output: Record saved

Flowchart:

Start → Input → Store → File Save → End

Project 7: Banking Management System

Input: Amount

Output: Balance

Flowchart:

Start → Input → Process → Update → Display → End

Project 8: Smart Attendance System

Input: Days present

Output: Percentage

Flowchart:

Start → Input → Calculate → Display → End

Project 9: Password Manager

Input: Password

Output: Encrypted storage

Flowchart:

Start → Input → Encrypt → Save → End

Project 10: Reservation System

Input: Seat

Output: Booking status

Flowchart:

Start → Input → Check → Confirm → End

Project 11: Shopping Cart Management system

Input: Items

Output: Bill

Flowchart:

Start → Input → Calculate → Display → End

Project 12: Contact Manager

Input: Contact

Output: Saved contact

Flowchart:

Start → Input → Store → Search → End

Project 13: Text Analyzer

Input: File

Output: Word count

Flowchart:

Start → Read → Count → Display → End

Project 14: Mini Social Media

Input: Post

Output: Likes/comments

Flowchart:

Start → Input → Store → Display → End

Guidelines

1. Use functions and modular programming.
2. Use at least one list and one dictionary.
3. Include proper input validation.
4. Provide output screenshots.
